Reason/s for attending LifeMoves: (reintegration into the community, returning to work, dealing with emotions, other)	
How did you learn about the LifeMoves program?	

Better Caring
Better Outcomes

LifeMoves provides structured peer support that empowers people living with acquired brain disorders. It is an eight-week program, with each week consisting of two-and-a-half hour sessions of client-generated discussions that are facilitated by trained peer support workers.

There is no cost to attend the program. Participants are required to provide their own transport.

Participants in LifeMoves programs shall:

- Have a diagnosis of an acquired brain disorder.
- Be over 18 years of age.
- Communicate in or understand English (Interpreters are not able to attend).
- Have adequate cognition and capacity to participate (at some level) in a group conversation

Carers are excluded from LifeMoves (to ensure clients may speak freely).
